Your three-day AI challenge

TTN & TTG AI Hackathon - 3-5 November 2026

Choose a real problem worth improving. Use AI to explore and develop an approach, try it on realistic work, and show what you learned. Aim to leave with something others could use or build on, and a worthwhile next step.

Five starting points

1. Understanding needs and defining work
2. Implementation and confidence in AI
3. Testing and quality
4. Bugs, recurring problems and technical debt
5. Product knowledge, documentation and technical support

Your project and your approach

Choose **one coherent problem with depth for three days** and a meaningful contribution from everyone. Start with a concrete case; look for what others could reuse. You own the methods and planning. Combining areas is optional.

Use AI to explore, develop, check and improve your work. Tools, analysis, workflows and documentation all count. **A production-ready solution is not expected.**

Two demos with equal focus on process and result

When	What to share
4 November, 13:00-14:00 **Direction and discoveries**	Your problem, how you use AI and combine skills, something you tried, and where you are heading. Seven teams: 3 min presentation + 2 min questions each; 25 min remain for introduction, changes and shared discussion.
5 November, 13:00-16:00 **Result and the story behind it**	10 min presentation: roughly half process, half result. Then 4 min questions and 1 min changeover/jury notes. Show examples, value, limits, recipient feedback and next steps.

All times are local. The event starts on 3 November at 09:30. Seven teams: final slots are 10 min presentation, 4 min questions and 1 min changeover/jury notes. Outside shared sessions, you manage your own working time.

What should remain after the event

Share your material or demo, intended beneficiary and a next step. If an experiment fails, share the evidence and learning. Actual use outside your team earns an advanced achievement; it is not required of every project.

Before the final demo

By 12:00 on 5 November: share your ticked checklist with the jury, adding a short evidence reference per claim. Page 2 has space for references. The jury confirms claims during the demo and questions. Updates are allowed before or during the demo. No separate report is needed.

Product-owner team: participation is arranged separately; this competition brief is intended for the other teams.

To be confirmed at kickoff: team/demo order, available tools and data, where to share material and how to submit the checklist.

Achievement hunt

Team: _____

Submit to the jury by 12:00 on 5 November. Tick claims and add short evidence references, e.g. a slide number or link. For Bridge builder, name the areas and show each contribution. No separate report.

Each achievement counts once; fixed items earn 1, 3 or 8 points. Claims support one project; fun items are exceptions. Every 8-point claim needs meaningful AI use, a realistic task and concrete evidence.

	Achievement	What to show	Pts	Evidence ref.
[ ]	Idea generator	Show ideas explored with AI and explain which you chose.	1	
[ ]	Problem detective	Show the original problem and how AI clarified the need or user.	3	
[ ]	Presentation copilot	Show how AI helped prepare your presentation or demo.	1	
[ ]	Naming things is hard	Introduce your project with an intentionally playful name. [FUN]	1	
[ ]	Prompt mechanic	Show a prompt or context change and how it improved the response.	3	
[ ]	Knowledge scout	Answer a real work question with AI and check the source material.	3	
[ ]	Builder mode	Show a working AI-assisted tool, analysis method or workflow.	3	
[ ]	Documentation upgrade	Show AI-assisted instructions or documentation checked against its source.	3	
[ ]	Rubber duck promotion	Introduce a rubber duck with an official team job title. [FUN]	1	
[ ]	Second pair of eyes	Use AI to find and confirm a real gap in a requirement, document or code.	3	
[ ]	Information you can trust	Show a reusable method for finding information problems; correct one case and verify against sources.	8	
[ ]	Beyond the happy path	Try a realistic difficult case; check the result and explain learning and any changes.	8	
[ ]	Root cause found	Use AI to investigate a real problem; show evidence verifying its cause.	8	
[ ]	404: dignity not found	Share a funny, harmless AI misunderstanding from your work. [FUN]	1	
[ ]	Better than before	Compare before/after on the same task using time, errors, completeness or another stated measure.	8	
[ ]	Bridge builder	Earn 3 points per additional starting area improved for users, beyond the first. Show each contribution.	0-12	
[ ]	Token diet	Reduce recorded input + output tokens across all calls/retries for the same task; pass the same quality checks.	8	
[ ]	Useful beyond our team	Someone outside your hackathon team uses your approach on a relevant task; show feedback, your response and a next step.	8	
[ ]	Repeatable success	Use two cases differing in product, task type or source; show what transfers and needs adapting.	8	
[ ]	Legacy compatibility	Include a Clippy, fax or Internet Explorer reference. [FUN]	1	

Bridge builder: 1 / 2 / 3 / 4 / 5 confirmed areas = **0 / 3 / 6 / 9 / 12 points**. Areas must improve work for users; building, testing and documenting the prototype alone do not count as multiple areas.

Areas: needs/defining work; implementation/confidence in AI; testing/quality; bugs/technical debt; product knowledge/documentation/technical support.

Score: ____ x 1 + ____ x 3 + ____ x 8 **(exclude Bridge builder)** + Bridge ____ /12 = **TOTAL** ____ **/92**. Gold, silver and bronze by total; ties: more 8-point items, then jury decision. People's Choice is separate.

Final slot: 10 min presentation, 4 min questions, 1 min changeover/jury notes. Give process and result equal attention. Updates are allowed before or during the demo; tell the jury.

One example may support multiple items if each condition is met. Fun points recognise participation. Choose what fits; completing the list is not expected. Token counts must come from tool usage reporting.
